

Journal of Cosmology: 9/17/2023:

If the mummified alien mummies displayed in Mexico are real, it is proof of universal life. A new Vol. 30 in the Journal of Cosmology is dedicated to universal life. A group of scientists led by a renowned recipient of the MBE, (Most Excellent Member of the British Empire), from King Charles, Chandra Wickramasinghe, and widely cited Harvard-Smithsonian Center for Astrophysics Astrophysicist, Rudy Schild, though skeptical about the supposed mummified aliens, show how widely the building blocks of lifeforms, oil, are distributed throughout the universe, and how lifeforms are distributed throughout. Other authors include Robert Temple, famed author of "The Sirius Mystery" investigation into ancient aliens, and Capt J. H. (Cass) Forrington, whose new model, "Time Dilation Cosmology", describes an eternal, apparently infinite, universe, resolving most conundrums in astrophysics. Though Einstein was not a pantheist, he said he thought the universe could be alive somehow. Vol. 30 describes how.
